

GEAR PUMP GCB SERIES

GCB SERIES

The GCB type oil dispensing pump is compatible to transfer various types of oil such as crude oil, diesel, lubricating oil, etc. If equipped with copper gears, the pump can transfer low flash point liquids such as gasoline, benzene and so on. The standard medium temperature is not more than 70 ° C. For pumps that can withstand high temperatures, they only need to change to high temperature resistant materials. For this type of pump, the temperature should not be more than 300°C, the viscosity should be $\times 5 \cdot 10^{-3} \sim 1.5 \cdot 10^{-2} \text{ m/s}^2$.

Technical Data

Pump Parameters

Capacity up to	m^3/hr	158
Head up to	mPa	1,45
Power up to	kW	250
